Article:	Annex:	Clause:
Key words: Retention system strength, adjustment		
Question: When the helmet is mounted on the headform according to clause 5.7.3, how to adjust and secure the retention system?		
Solution: The retention system shall be adjusted and secured in the middle of its length.		
Rationale: The standard does not indicate how to adjust and secure the retention system. However, the method is critical as it will greatly influence the test results (e.g. the elongation will be reduced if the retention system is tight at the maximum, on the contrary the elongation will be increased if the retention system is tight at the minimum).
