Question: At present there appears to be no requirement to test gloves, boots, etc attached to chemical suits for resistance to permeation against the same chemicals as the main body of the suit.		
Solution: We propose to test the materials of gloves to either EN 374-3 or EN 369 using the same battery of chemicals that the main part of the suit has been tested against. For the boots there is no standard. The N.B. shall conduct all necessary tests to establish the conformity for the same battery of chemicals. The user information should include test data for the individual components of the clothing assembly.
