Question related to	PPE Regulation	☐ EN/prE	N:	Other:	
Article:	Annex:	Clause:			
Key words: test reports, designation of materials					
Question: In test reports, materials are often only referred to by a single, mostly commercial reference name. In many cases, however, this name covers a variety of materials different by structure and weight (for fabrics) or by origin and thickness (for leather).					
Is it possible to have a uniform and clear "finger print designation" of materials in test reports in order to make an evaluation easier?					
For this purpose, we propose to use the elements as given below:					
- aramid twill 2/1 - 270 g/m²					
- cow split 1.3 - 1.5 mm.					
Solution:					
A unique reference number or name identifying the material must be the same in the technical documentation and in the test report.  The technical documentation should contain a documentation of the material, i. e. a sample or a proper identification.
