Article: Annex: Clause: EN 13594		
Key words: Glove closure		
<p>Question:</p> <p>gloves may have a closure system which creates a little hole in the upper hand-wrist joint area like in the picture; is this acceptable, considering the standard states that gloves shall cover the hand from finger to cuff?</p> <div style="display: flex; justify-content: space-around;">   </div>		
<p>Solution:</p> <p>Yes</p> <p>A small opening of approximately 1cm², that does not fall within 15mm of the wrist which could be linked to the way the closure is fastened and the size of the hand, as well as the thickness of the materials, is allowed as the risk for the potential “exposed” skin is very low</p>
