Question: Is the dimension of 25,5mm between points D & E correct?			
Solution: No, the drawing includes an error.  The 25,5mm dimension should be drawn between the vertical transverse plane and point E.  Rationale: EN 13484:2012 figure 2 places point E at 25.5mm behind point D, but also behind the vertical transverse plane.  This is in contradiction, because 25,5mm behind point D would be in front of the vertical transverse plane.  EN 1077:2007 figure 1 is very similar and shows point E positioned 25,5 mm behind the vertical transverse plane.
