Question related to PPE Regulation EN/prEN: ISO 20345: 2011 Other:

Article: Annex: Clause:

Key words:
Water vapour permeability and coefficient on clog

Question:
The product is a clog without toecap. The manufacturer wants to perform tests according to EN ISO 20347: 2012 and claim the category OB (because the seat area is not closed).
The upper material is a leather but with a specific coating and doesn't fulfill the water vapour permeability and coefficient.
This product cannot be considered as a class II because it's not an item of rubber/elastomeric footwear.
So is it possible to certify this product according EN ISO 20347 without WVP/WVC requirement because of his design ?

Solution:
No
Need to certify to the PPE Regulation using a technical specification because one of compulsory requirement of EN ISO 20347 is not fulfilled.
